More4Apps offers a broad selection of Excel-based data integration products to process information with superior speed and accuracy. This provides more reliable, timely data delivery for users of the Oracle E-Business Suite who are looking for the best user experience available.

Background

A member of the Oracle Partner Network, More4Apps focuses on building high quality Excel-based interface tools for the Oracle E-Business Suite. "Our people are experienced Oracle professionals, and our tools have been designed and developed with input from our customers. It is our business to keep up-to-date with Oracle development activity so you don't have to worry about upgrades. Leave that to us."

Benefits

- Increase productivity, reduce data-entry time and costs
- Increase accuracy, by validating prior to loading
- Empower end-users to load large numbers of transactions
- Reduce dependency on specialist IT resources
- Quick to implement and deliver solutions
- No client installation
- Consistent look-and-feel in Excel, easy to learn and use
- Compliant with Oracle Support

Use the power of Excel to improve productivity, increase accuracy and reduce re-work; and give managers the confidence that the reports they receive from Oracle reflect current information.

Customer Comments:

More4Apps solutions are very affordable. The time benefits realized in the first upload of a national rollout program paid for the cost of the software. Not to count the 50 plus rollouts we have had since then. This has been a great firm to assist us over the past couple of years.

7-Eleven, Inc

More4Apps Project Wizard (and the new Asset Loader) have been exceptional tools and played key roles in conversion and creating the many thousands of projects and assets on a monthly basis. The time and effort saved by using **More4Apps** products have been immeasurable. The **More4Apps** Support Team have been first class in taking care of any issues we encounter since our purchase of Project Wizard (Asset Loader) and Budget Wizard. We continue to find new ways to utilize the tools to create efficiencies in our business. Thanks for commitment to excellence.

Best Buy Inc

User Highlights

"More4Apps have developed a number of product offerings that add value to the Oracle E-Business Suite..."

"...These products will reduce data entry time, practically eliminate keying errors, and increase your productivity."

Client:

*Parsons Brinckerhoff
- world leading engineering consultants and project managers.*

Business Problem:

Ensuring project budgets were as accurate and current as possible.

Solution:

More4Apps Budget Wizard for loading budget data into Oracle Projects.

Results:

A user friendly tool for end-users that helps them keep project budgets up-to-date which impacts positively on the accuracy of management reports.

Tools for Oracle Assets

Asset Wizard: Enables you to quickly create new assets and modify existing assets using Excel. You can download your assets for maintenance or use the information as the basis for new assets. The following transaction types are supported: additions, tax additions, depreciation, adjustments, transfers, reinstatements, retirements, reclassifications, revaluations, and capitalization of CIP Assets.

Tools for Oracle Manufacturing & Inventory

BOM Wizard: Create and maintain Bills of Materials from Excel. BOM Wizard can be used to download current Bills of Materials. You can use the information as the basis for a new BOM or to update an existing BOM.

Item Cost Wizard: Is the perfect tool to take the pain and frustration out of creating and updating standard costs in the Oracle E-Business Suite. This wizard allows you to make updates to the material sub element level. Item Cost Wizard provides quick and useful download options to make updating costs a simple task.

Item Wizard: Item Wizard is an Excel based front-end for creating and maintaining Oracle Inventory Items. This program contains the validation and defaulting rules of the Oracle forms plus the capabilities made possible by our popular spreadsheet model. You can download existing items, categories and catalogs from within Oracle as the basis for your new items and employ the features of Excel to help prepare your data.

Material Transaction Wizard: Creates Inventory Material Transactions from Excel. It covers the functionality found in the Miscellaneous Transactions form, with the added benefit of an account generator and multiple download sources from which you can build your transaction requirements.

Routing Wizard: Routing Wizard is the solution for all your routing creation and maintenance needs. It allows you to upload and download your routings to-and-from Oracle Bill of Materials, from within Excel.

Tools for Oracle Receivables & Order Management

AR Invoice Wizard: Improves productivity by enabling large numbers of invoices to be loaded quickly and accurately into Oracle Receivables.

AR Receipt Wizard: Reduce processing time and inefficiencies associated with loading and applying large numbers of receipts. Capture the data once and then automatically create and allocate receipts.

Customer Wizard: Manages the loading and maintenance of Customer master data from Excel into Oracle Receivables.

Price List Wizard: Manages the loading and maintenance of Price Lists from Excel into Oracle, which then can be used in the Purchasing and Order Management applications. Price List Wizard includes the ability to set Advanced Pricing attributes and qualifiers for the Price List.

Sales Order Wizard: Validate and load orders into Oracle that come from spreadsheets and other sources. Sales Order Wizard includes the ability to create repetitive orders by downloading, modifying and creating new orders.

Sales Quote Wizard: Create, maintain or delete your quotes from Excel into Oracle Order Capture. Download quote information for maintenance or as the basis for new quotes.

Support Services

- Live Web Demonstrations
- Implementation Support
- On-going Product Support
- Enhancements
- On-line User Documentation
- Training
- Download Product Trials and Upgrades

In Development

- Download Wizard
- P.O. Receipt Wizard

- WIP Job Wizard

Available on Request

- Support for "Grants Budgets" within Oracle Projects
- Supplier Wizard for Release 11i
- Wizards for Oracle versions prior to Release 11i (i.e. 11.5.9)

Tools for Oracle Purchasing & Payables

AP Invoice Wizard: Harness the full power of Excel's productivity features to simplify invoice preparation and data entry tasks. Use this productivity enhancing tool to ease the pain of loading large numbers of invoices.

P.O. Wizard: Create both standard and blanket purchase orders. Download existing purchase orders, quickly create new purchase orders and maintain existing blanket purchase orders.

Price List Wizard: Manages the loading and maintenance of Price Lists from Excel into Oracle, which then can be used in the Purchasing and Order Management applications. Price List Wizard includes the ability to set Advanced Pricing attributes and qualifiers for the Price List.

Requisition Wizard: Reduce process time and inefficiencies associated with loading and applying large numbers of Requisitions by using a template driven tool. More4Apps Requisition Wizard is the only Excel-based Requisition loading tool available for Oracle Purchasing or iProcurement.

Supplier Wizard: Supplier Wizard enables end-users to maintain supplier master-data from Excel into Oracle EBS (R12+). Useful for data-conversion and regular maintenance of supplier information.

Tools for Oracle Projects

Agreement & Funding Wizard: Enables the loading and maintenance of agreement and funding records into Oracle Projects from Excel.

Budget Wizard: Create new budgets or modify existing budgets from Excel into Oracle Projects. More4Apps Budget Wizard supports all budget entry methods including Plan Types. The download can include Actuals information.

Event Wizard: Create, maintain and download Revenue and Billing Events. Event Wizard enables you to prepare, validate and upload, quickly and easily.

Project Wizard: Use Excel to create large numbers of projects, during conversion or regular maintenance. Project Wizard supports projects, tasks, classifications, key members, project assets, assignments, sub projects, bill rate overrides and transaction controls.

Transaction Wizard: Enables you to load your Oracle Projects transactions directly from an Excel spreadsheet. It is designed to assist you in loading transactions that come from spreadsheets or other sources

Tools for Oracle Human Resources

Employee Wizard: Employee Wizard enables the loading and maintenance of core employee and assignment information into Oracle Human Resources. This product includes: employee, address, phone, contact, assignment, US federal tax, US state tax, costing, budget, salary proposal, salary approval and payment method information.

Element Entry Wizard: Element Entry Wizard can load both recurring and non-recurring element entries against employee assignments. You can also extract existing element entries, make changes and reload.

Special Information Wizard: Special Information Wizard enables the loading and maintenance of Special Information against employees. Special Information Wizard has a very easy-to-use Excel interface that configures itself according to your special information types with custom field names, lists of values etc.
